6.   (original) The backup system of claim 5 wherein the program is further configured to copy the files from the data storage appliance to the hard drive without installation of the program on the hard drive.

7.   (original) The backup system of claim 5 wherein the program is further configured to execute automatically upon the program appliance being attached to the computer.

8.   (original) A computer-readable medium having stored thereon a data structure comprising:

a storage address table; and

a plurality of files,

wherein the storage address table identifies a first backup with which a first set of the plurality of files is identified, and

wherein the storage address table identifies a second backup with which a second set of the plurality of files is identified, and

wherein files common to the first backup and the second backup are represented only once within the plurality of files.

9.   (original) The computer-readable medium of claim 8 wherein the first backup and the second backup are performed as to a first computer and a second computer, respectively.

10.   (original) The computer-readable medium of claim 8 wherein the first backup and the second backup are performed as to a first computer at a first time and at a second time, respectively.

11.   (original) The computer-readable medium of claim 8 wherein the storage address table comprises a set of file names.

12.   (original) The computer-readable medium of claim 11 wherein the storage address table is further comprised essentially of:

a computer state tag;

a computer type;

a model number; and

a serial number.
